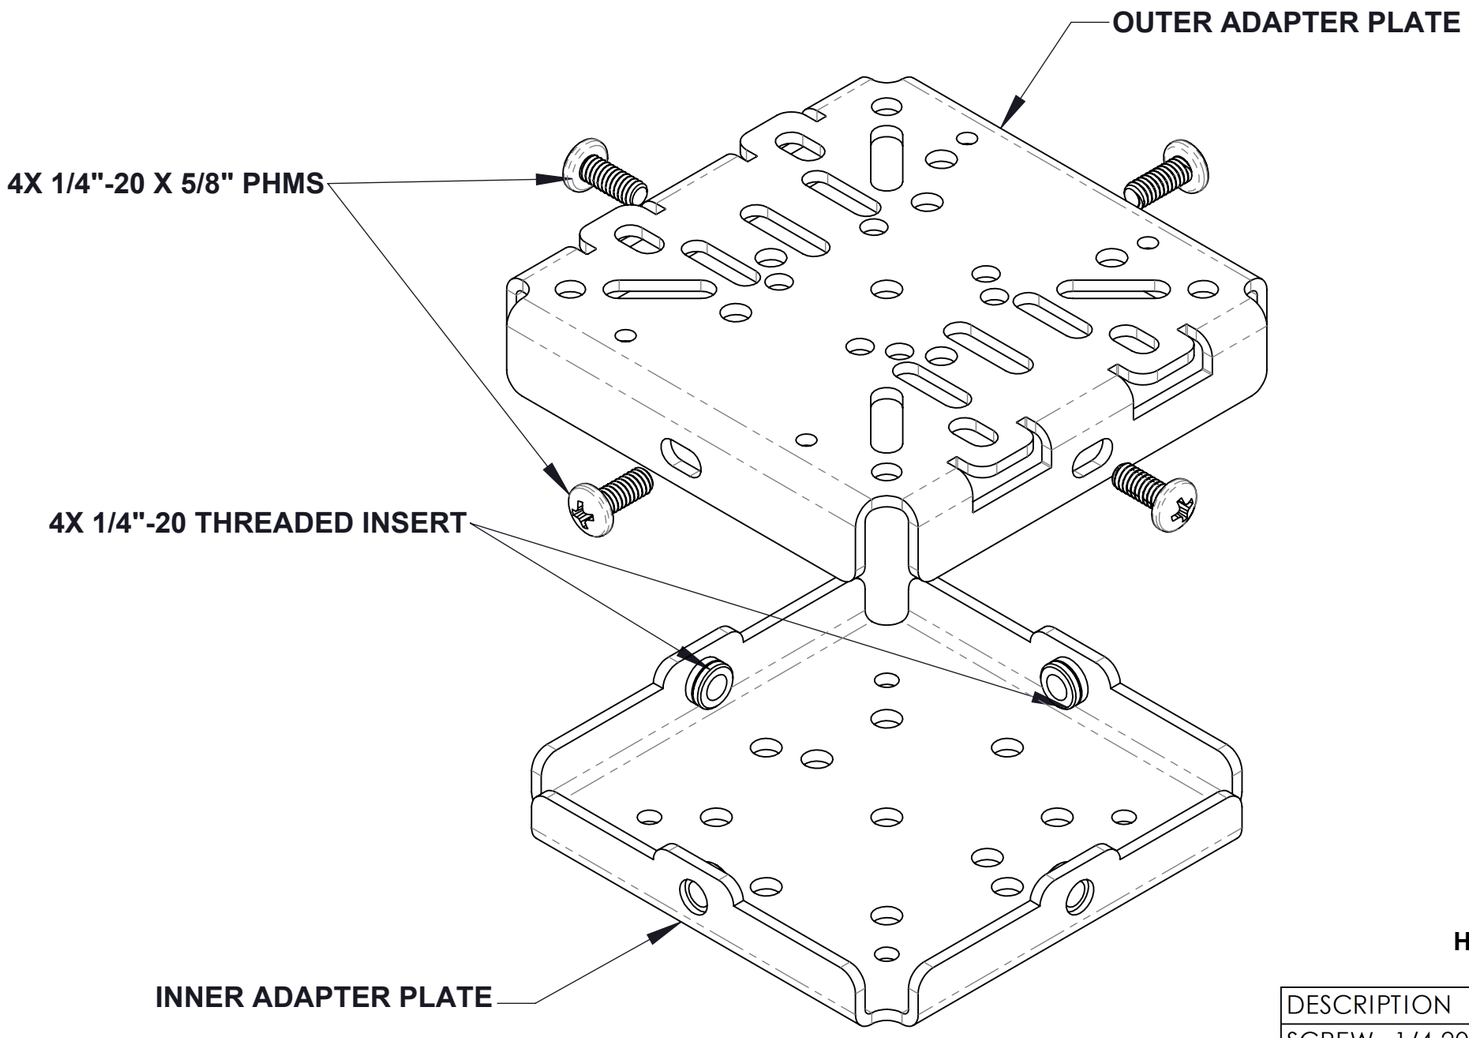
WARNING!
USE SELF LOCKING HARDWARE OR THREAD LOCKING ADHESIVE, WHEN FASTENING THIS ADAPTER TO DOCKS AND MOUNTING DEVICES



INSTALLATION INSTRUCTIONS:

1. Find adapter plate with matching hole/slot pattern to device being mounted. Position Adapter Plate to the bottom of the device. Note that the orientation of the Adaptor Plates should be such that when the 2 Adapter Plates are assembled the slots on the outer plate will be running side-to-side.

2. Line up device mounting holes with holes/slots on respective Adapter Plate.

3. Use device mounting screws to mount Adapter Plate to device. Tighten to manufacturer's recommended torque (screws not provided).

4. Position the remaining Adapter Plate to the top of the motion device.

5. Align motion device mounting holes with holes/slots on remaining Adapter Plate.

6. Use motion device mounting screws to mount the second Adapter Plate to the motion device. Tighten to manufacturer's recommended torque (screws only provided for Havis C-MD-200 series).

7. Once one Adapter Plate is assembled to the device to be mounted and the other is mounted to the motion device, bring 2 Adapter Plates together and align threaded inserts from Inner Plate with slots on side flanges of the Outer Plate.

8. Assemble 4X 1/4"-20 X 5/8" PHMS through holes and into threaded inserts. Leave screws loose until all are started into threaded inserts. If space limitations do not allow for the installation of all 4 screws, you may eliminate the use of one screw. DO NOT OVER TIGHTEN.
